

## Завдання:

Змодельувати наступну предметну область:

- Є: Items, Customers, Orders

```
neo4j$ CREATE(:Item {name: "Tulip", color: "RedWhite", cost: 75.0})
Created 1 node, set 3 properties, added 1 label

neo4j$ CREATE(:Item {name: "Tulip", color: "Purple", cost: 40.0})
Created 1 node, set 3 properties, added 1 label

neo4j$ CREATE(:Item {name: "Tulip", color: "White", cost: 50.0})
Created 1 node, set 3 properties, added 1 label

neo4j$ CREATE(:Item {name: "Daisy", color: "White", cost: 65.0})
Created 1 node, set 3 properties, added 1 label

neo4j$ CREATE(:Item {name: "Rose", color: "White", cost: 115.0})
Created 1 node, set 3 properties, added 1 label

neo4j$ CREATE(:Item {name: "Rose", color: "Red", cost: 100.0})
Created 1 node, set 3 properties, added 1 label
```

```
neo4j$ CREATE(:Customer {name: "customer_3"})
Created 1 node, set 1 property, added 1 label

neo4j$ CREATE(:Customer {name: "customer_2"})
Created 1 node, set 1 property, added 1 label

neo4j$ CREATE(:Customer {name: "customer_1"})
Created 1 node, set 1 property, added 1 label
```

```
neo4j$ CREATE(:Order {identifier: 'Order_4'})
Created 1 node, set 1 property, added 1 label

neo4j$ CREATE(:Order {identifier: 'Order_3'})
Created 1 node, set 1 property, added 1 label

neo4j$ CREATE(:Order {identifier: 'Order_2'})
Created 1 node, set 1 property, added 1 label

neo4j$ CREATE(:Order {identifier: 'Order_1'})
Created 1 node, set 1 property, added 1 label
```

- Customer може додати Item(s) до Order (тобто купити Товар)

```
neo4j$ MATCH(c:Customer {name: "customer_3"}),(o:Order {identifier: "Order_4"}) CREATE(c)-[:GET]->(o)
Created 1 relationship
> ⓘ This query builds a cartesian product between disconnected patterns.

neo4j$ MATCH(c:Customer {name: "customer_2"}),(o:Order {identifier: "Order_3"}) CREATE(c)-[:GET]->(o)
Created 1 relationship
> ⓘ This query builds a cartesian product between disconnected patterns.

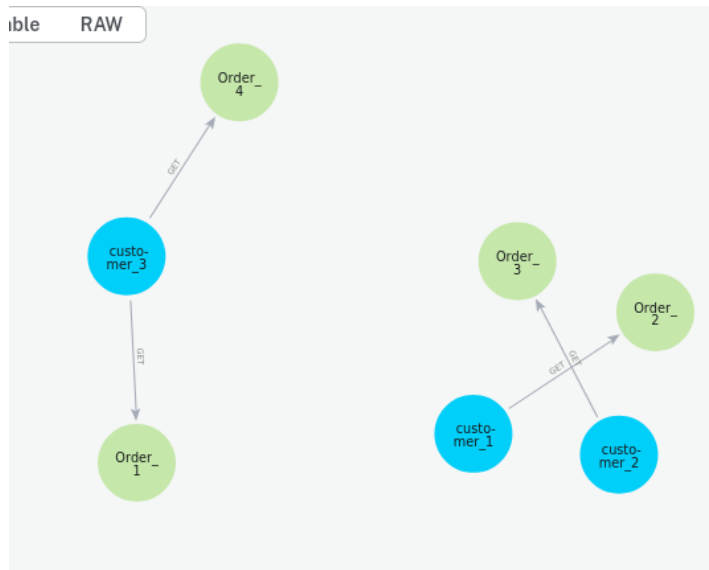

neo4j$ MATCH(c:Customer {name: "customer_1"}),(o:Order {identifier: "Order_2"}) CREATE(c)-[:GET]->(o)
Created 1 relationship
> ⓘ This query builds a cartesian product between disconnected patterns.
```

- У Customer може бути багато Orders

```
neo4j$ MATCH(c:Customer {name: "customer_3"}),(o:Order {identifier: "Order_1"}) CREATE(c)-[:GET]->(o)
```

✓ Created 1 relationship

> ⓘ This query builds a cartesian product between disconnected patterns.

- Item може входити в багато Orders, і у Item є вартість

```
neo4j$ MATCH(o:Order {identifier: "Order_3"}),(i:Item {cost: 75.0, color: "RedWhite", name: "Tulip"}) CREATE (o)-[:CONTAINS]->(i)
```

✓ Created 1 relationship Completed after 58 ms

> ⓘ This query builds a cartesian product between disconnected patterns.

```
neo4j$ MATCH(o:Order {identifier: "Order_3"}),(i:Item {cost: 40.0, color: "Purple", name: "Tulip"}) CREATE (o)-[:CONTAINS]->(i)
```

✓ Created 1 relationship Completed after 18 ms

> ⓘ This query builds a cartesian product between disconnected patterns.

```
neo4j$ MATCH(o:Order {identifier: "Order_3"}),(i:Item {cost: 50.0, color: "White", name: "Tulip"}) CREATE (o)-[:CONTAINS]->(i)
```

✓ Created 1 relationship Completed after 18 ms

> ⓘ This query builds a cartesian product between disconnected patterns.

```
neo4j$ MATCH(o:Order {identifier: "Order_2"}),(i:Item {cost: 115.0, color: "White", name: "Rose"}) CREATE (o)-[:CONTAINS]->(i)
```

✓ Created 1 relationship Completed after 18 ms

> ⓘ This query builds a cartesian product between disconnected patterns.

```
neo4j$ MATCH(o:Order {identifier: "Order_1"}),(i:Item {cost: 65.0, color: "White", name: "Daisy"}) CREATE (o)-[:CONTAINS]->(i)
```

✓ Created 1 relationship Completed after 15 ms

> ⓘ This query builds a cartesian product between disconnected patterns.

```
neo4j$ MATCH(o:Order {identifier: "Order_1"}),(i:Item {cost: 100.0, color: "Red", name: "Rose"}) CREATE (o)-[:CONTAINS]->(i)
```

✓ Created 1 relationship Completed after 16 ms

- Customer може переглядати (view), але при цьому не купувати Items

```
neo4j$ MATCH(c:Customer {name: "customer_2"}),(i:Item {cost: 65.0, color: "White", name: "Daisy"}) CREATE (c)-[:VIEWED]->(i)
```

Created 1 relationship  
Completed after 61 ms

This query builds a cartesian product between disconnected patterns.

```
neo4j$ MATCH(c:Customer {name: "customer_1"}),(i:Item {cost: 75.0, color: "RedWhite", name: "Tulip"}) CREATE (c)-[:VIEWED]->(i)
```

Created 1 relationship  
Completed after 73 ms

This query builds a cartesian product between disconnected patterns.

```
neo4j$ MATCH p=()-[]->() RETURN p LIMIT 25;
```

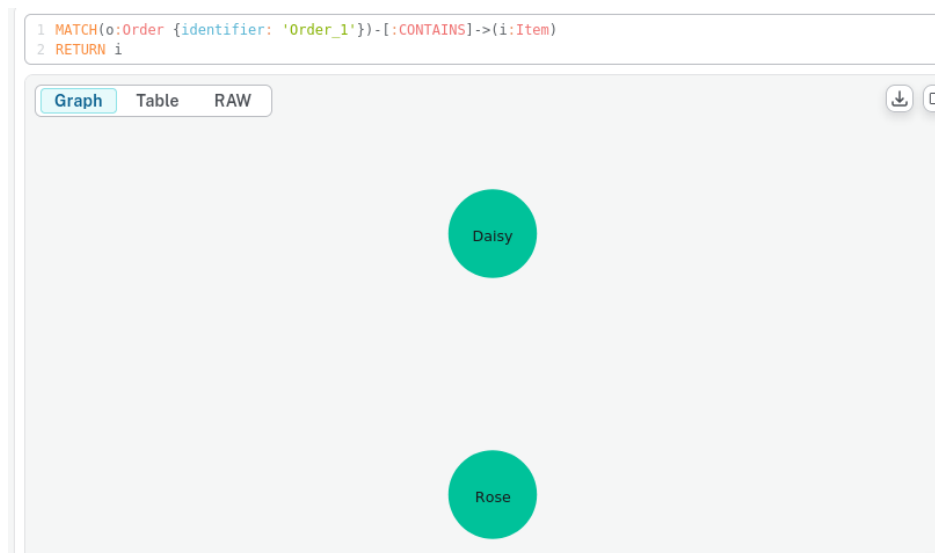

Graph Table RAW

1. Написати наступні види запитів:

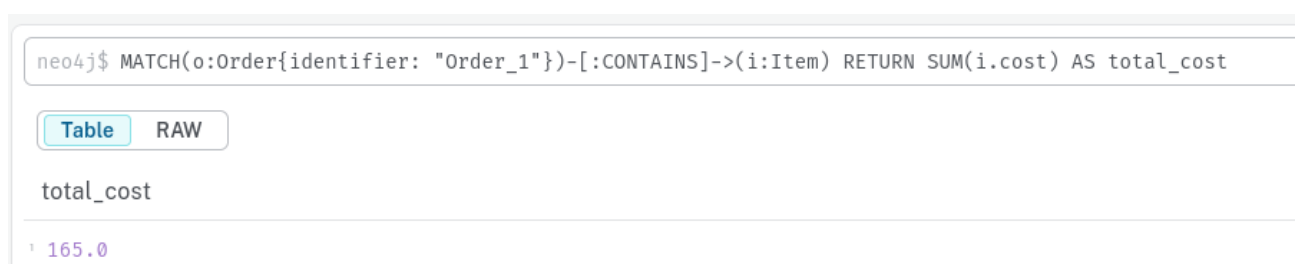

- Знайти Items які входять в конкретний Order

```
neo4j$ MATCH(o:Order {identifier: 'Order_2'})-[:CONTAINS]->(i:Item) RETURN i
```

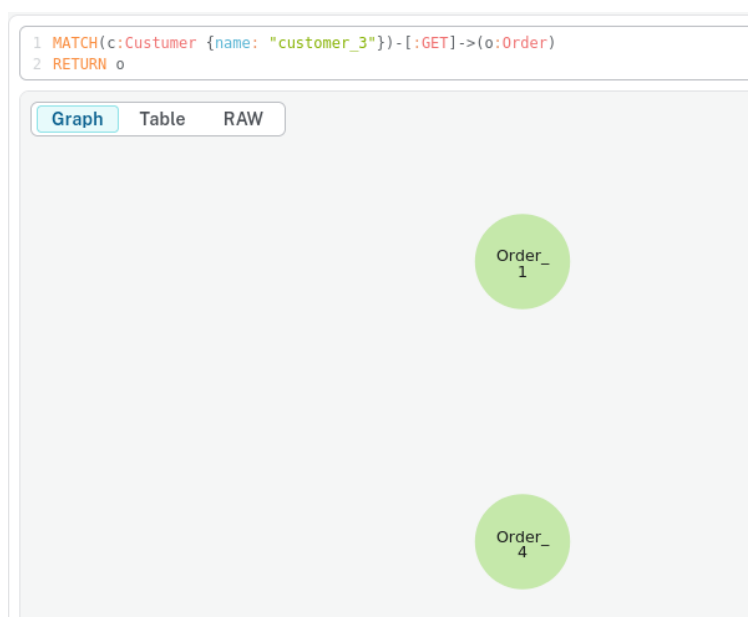

Graph Table RAW

- Підрахувати вартість конкретного Order

- Знайти всі Orders конкретного Customer

- Знайти всі Items куплені конкретним Customer (через Order)

```
1 MATCH(c:Customer {name: "customer_2"})-[:GET]->(o:Order)-[:CONTAINS]->(i:Item)
2 RETURN i
```

Graph Table RAW

- Знайти кількість Items куплені конкретним Customer (через Order)

```
neo4j$ MATCH(c:Customer {name: "customer_2"})-[:GET]->(o:Order)-[:CONTAINS]->(i:Item) RETURN COUNT(i) AS total_items_amount
```

Table RAW

total\_items\_amount

1 3

Started streaming 1 record after 74 ms on

- Знайти для Customer на яку суму він придбав товарів (через Order)

```
1 MATCH(c:Customer {name: "customer_2"})-[:GET]->(o:Order)-[:CONTAINS]->(i:Item)
2 RETURN SUM(i.cost) AS total_cost
```

Table RAW

total\_cost

1 165.0

- Знайти скільки разів кожен товар був придбаний, відсортувати за цим значенням

```

1 MATCH(i:Item)<-[:CONTAINS]-(o:Order)
2 RETURN i, COUNT(o) AS items_got ORDER BY items_got DESCENDING

```

Graph **Table** RAW

i	items_got
<sup>1</sup> (:Item {cost: 100.0, color: "Red", name: "Rose"})	1
<sup>2</sup> (:Item {cost: 65.0, color: "White", name: "Daisy"})	1
<sup>3</sup> (:Item {cost: 115.0, color: "White", name: "Rose"})	1
<sup>4</sup> (:Item {cost: 50.0, color: "White", name: "Tulip"})	1
<sup>5</sup> (:Item {cost: 40.0, color: "Purple", name: "Tulip"})	1
<sup>6</sup> (:Item {cost: 75.0, color: "RedWhite", name: "Tulip"})	1

```

1 MATCH(o:Order {identifier: "Order 2"}),(i:Item {cost: 65.0, color: "White", name: "Daisy"})
2 CREATE (o)-[:CONTAINS]->(i)

```

✓ Created 1 relationship

> ⓘ This query builds a cartesian product between disconnected patterns.

```

1 MATCH(i:Item)<-[:CONTAINS]-(o:Order)
2 RETURN i, COUNT(o) AS items_got ORDER BY items_got DESCENDING

```

Graph **Table** RAW

i	items_got
<sup>1</sup> (:Item {cost: 65.0, color: "White", name: "Daisy"})	2
<sup>2</sup> (:Item {cost: 100.0, color: "Red", name: "Rose"})	1
<sup>3</sup> (:Item {cost: 115.0, color: "White", name: "Rose"})	1
<sup>4</sup> (:Item {cost: 50.0, color: "White", name: "Tulip"})	1
<sup>5</sup> (:Item {cost: 40.0, color: "Purple", name: "Tulip"})	1
<sup>6</sup> (:Item {cost: 75.0, color: "RedWhite", name: "Tulip"})	1

- Знайти всі Items переглянуті (view) конкретним Customer

```
1 MATCH(c:Customer {name: "customer_1"})-[:VIEWED]->(i:Item)
2 RETURN i
```

Graph Table RAW

- Знайти інші Items що купувались разом з конкретним Item (тобто всі Items що входять до Order-s разом з даними Item)

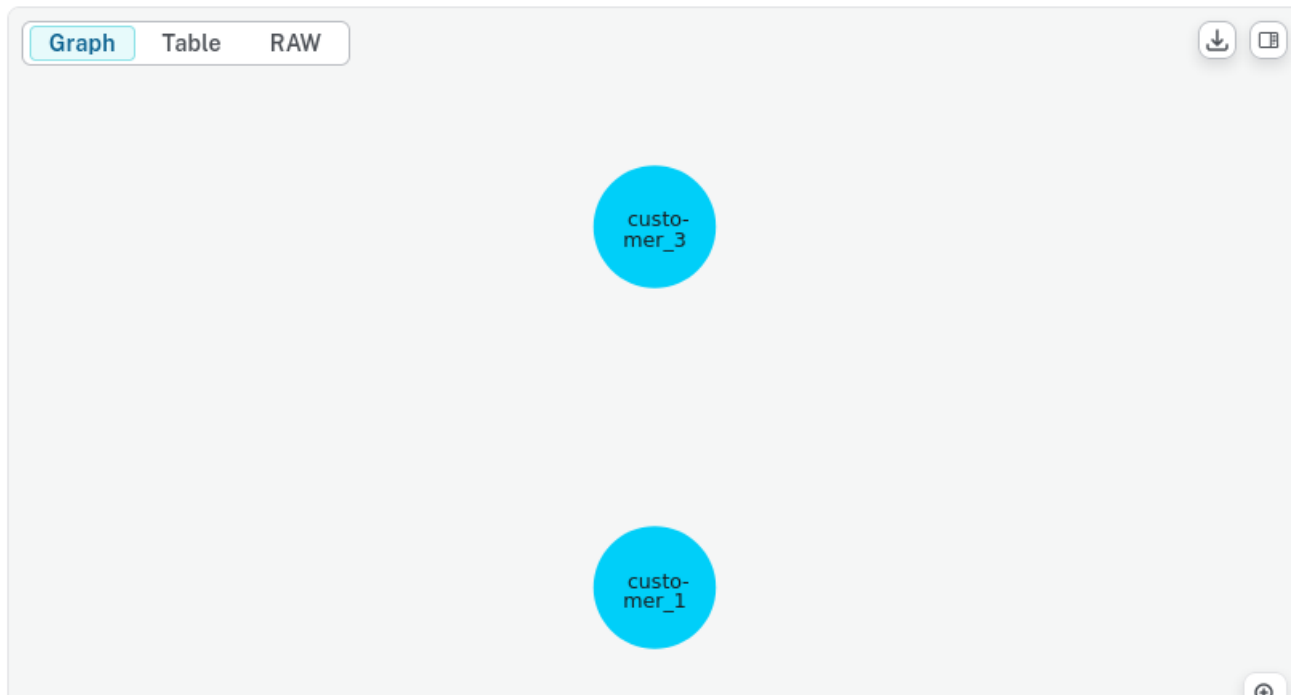

```
1 MATCH(i:Item {cost: 65.0, color: "White", name: "Daisy"})<-[:CONTAINS]-(o:Order)-[:CONTAINS]->(i_:Item)
2 WHERE i<>i_
3 RETURN i_
```

Graph Table RAW

- Знайти Customers які купили даний конкретний Item

```
1 MATCH(i:Item {cost: 65.0, color: "White", name: "Daisy"})<-[:CONTAINS]-(o:Order)<-[:GET]-(c:Customer)
2 RETURN c
```

- Знайти для певного Customer(а) товари, які він переглядав, але не купив

2. Як і в попередніх завданнях, для якогось одного обраного Item додайте поле з кількістю його лайків.

- З 10 окремих клієнтів одночасно запустити інкрементацію каунтеру лайків по 10\_000 на кожного клієнта
- зробіть так щоб не було втрат та перевірте щоб фінальне значення було 100\_000
- заміряйте час роботи
